

ELECTUDE

CL-1919-05

Ohm's Law and DC Circuits Trainer

**Integrated Courseware
and Training Aid**

LET POTENTIAL FLY

ConsuLab CL1919-15-05 Ohm's Law and DC Circuits Trainer

Courseware overview

Electude's lesson modules show students how to use the training aid to learn electrical/electronic concepts. Students will learn

how to build, measure and diagnose series, parallel and series-parallel circuits through guided, practical and hands-on experiments.

Training Aid Features

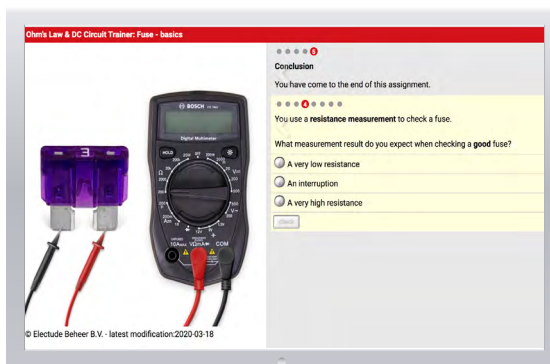

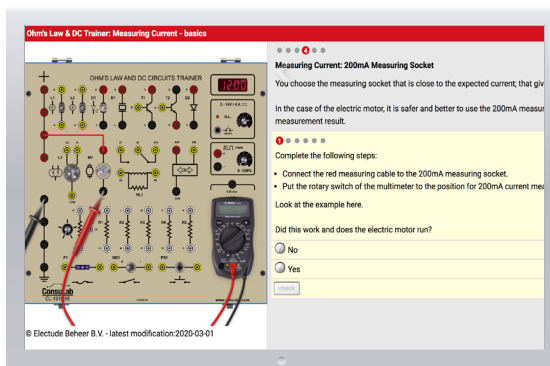

- Self powered board
- Built-in multi meter
- Multimeter can be used even if after circuit breaker trips.
- Provided jumper wires – connect circuits and components – teaches series, parallel, and series-parallel circuit construction.

Learning Activities

18 hands-on learning activities including:

- Measuring voltage, resistance and current
- Build series, parallel and series-parallel circuits
- Fuses
- Resistors
- Relays
- Transistors
- Diodes
- LEDs.

Adopters of Automotive Essentials also have access to sixteen lesson modules that support the hands-on learning activities.
